

TRANSPARENCY ACT REPORT

2022

North Energy ASA

Introduction

The Transparency Act entered into force on 1 July 2022. The Transparency Act is intended to help us reduce the risk of businesses causing or contributing to violations of human rights. It also contributes to the fact that we must do our part to ensure decent working conditions with our suppliers and with our owners, as well as with ourselves.

The Act shall promote companies' respect for basic human rights and decent working conditions. This applies to the company's own business, suppliers, and the value chain of the suppliers. The law requires, among other things, the businesses to carry out due diligence assessments in order to understand the risk of possible breaches - and to introduce measures where necessary. Furthermore, the business has a duty to inform about what is used as a basis for the due diligence assessments and the results of these.

On August 24, 2022, the board of North Energy ASA approved an internal procedure on how the company should comply with the Transparency Act.

This report has been prepared in accordance with the Norwegian Transparency Act (the Transparency Act) section 5 and summarizes the policies and procedures in North Energy ASA ("North Energy" or "Company") with respect to safeguarding of human rights and decent working conditions and provides information on the implementation and results of North Energy's due diligence.

About North Energy

North Energy is an industrial investment company seeking to provide shareholders with an attractive return on its shares based on a strategy of active ownership. The Company is investing within the energy value chain and other industries and its vision is to be a successful and respected investment company with focus on long term value creation.

In 2022 the main industrial investments of North Energy have been shares in Reach Subsea ASA ("REACH") and Wind Catching Systems AS ("WCS"). The main financial investment has been shares in Touchstone Exploration Inc ("TXP"). In addition, the Company has taken steps to optimize excess liquidity by the establishment of a new multicurrency credit facility with DNB where the Company uses listed financial investments as collateral and placed excess cash in NOK denominated investment grade bonds. This gives the Company more flexibility when it comes to liquidity management.

From 1st of January 2022 the former senior advisors have been employed by the Company in the roles as co-CEO and by the end of 2022, the Company counted 3 full time employees. North Energy's head office is in Oslo.

Governance of human rights

North Energy must run its business without this coming at the expense of basic human rights and decent working conditions. Therefore, North Energy carries out a due diligence assessment of its own and suppliers' operations.

North Energy strives to follow the OECD guidelines for due diligence assessments. In this assessment, we look at how large purchases we make from each individual supplier, which countries they operate in and whether they have their own goals and processes to safeguard human rights and good working conditions.

FIGURE 1. DUE DILIGENCE PROCESS & SUPPORTING MEASURES

A due diligence assessment under the Transparency Act means that an enterprise will investigate whether there are any actual, or risks of, adverse impacts on human rights or decent working conditions in their own operations, their supply chain and other business relationships.

Part of the assessment is then to prevent and mitigate any such adverse impacts.

Due diligence shall be carried out regularly and in proportion to the size of the enterprise, the nature of the enterprise, the context of its operations, and the severity and probability of adverse impacts on fundamental human rights and decent working conditions.

Risk assessment routine

Own operation

North Energy wants to contribute positively to promoting respect for human rights and employee rights. We therefore choose to work with responsible suppliers and partners. We conduct our business in Norway in accordance with laws, regulations, and good business practice. We have regulated working hours and a competitive salary, which makes it possible to recruit, develop and retain relevant employees.

Suppliers and partners

Once a year the administration identifies active suppliers where our procurement exceeds NOK 100k per year.

The list of identified suppliers is then assessed and categorised based on the following criteria:

- a) Type of supplier/company
- b) Country of operation
- c) Complies with the Transparency Act or not
- d) Nature of the business conducted
- e) General risk of business conducted
- f) Specific risk assessment
 - a. Low
 - b. Medium
 - c. High

The same assessment is carried out for any new suppliers prior to any commitments being made.

Risk assessment outcome

In 2022, North Energy has carried out risk assessment as described above and has not identified any actual negative impact on human rights or decent working conditions in the Company's own operation and its suppliers' operations.

All the suppliers exceeding the threshold described above, i.e. procurement in excess of NOK 100k, has been classified as low risk.

Mitigation of risks

Measures that are suitable for counteracting actual or potential negative consequences for basic human rights and decent working conditions must be determined concretely in light of the identified negative consequence, whether the risk lies with a supplier or further down the supply chain, and which measures that could be assumed to have an effect.

Examples of possible measures are action plans, audits, new and tightened contractual obligations, as well as sanctions for breach of contract if this is applicable. It may also be relevant to enter into a collaboration with other companies in the same industry, in order to streamline the follow-up of suppliers, as well as jointly exert a stronger influence to counteract negative consequences.

As a consequence of the result of the risk assessment performed in 2022 the Company has not implemented any specific actions towards suppliers to mitigate the risk related to human rights and decent working conditions.

Looking forward 2023

To strengthen North Energy's effort to safeguard human rights and decent working conditions the following area will be in focus going forward.

Continue to monitor key suppliers and partners in respect of their establishment and implementation of processes and practices for identifying, assessing, and mitigating own risk of negative impact on human rights and decent working conditions.

Ensure that our own business in Norway operate in accordance with laws, regulations, and good business practice.
